

---

Dear ESAM Members,

I noted with great interest the possibility of integrating the ESAM Executive Committee ; It would be an honor to work with you all.

Currently, I practice aeronautical medicine in many different ways.

Principally, I am delighted to work as medical advisor for Eurocontrol Innovation Hub in Brétigny and ECAC-CEAC in Neuilly.

I also work as medical advisor for different european airline and private jet companies. I am used to working in a team with aeronautical psychologists, HRD... in the recruitment of pilots and cabin crew.

The latest pandemic has kept me very busy like all of you .

I have a regular activity as AME for pilots (plane, helicopters, hot air balloons, gliders) , cabin crew, parachutists, astronaut candidates, and zero G certificates...

I am also used to holding teleconsultations for aircrew on stopovers around the world.

I have always been passionate about astrophysics, space physiology, astronautics, aeronautics, human factors, innovation and medicine. I am curious and enthusiastic, enjoy discovering European and international culture and like working in team.

Working with you, European expert physicians in space medicine and aeronautical medicine would be very exciting.

Sincerely yours,

François BERNARD
